

The Next Generation DKE

Next Generation DKE is the network for young standard setters of the German Commission for Electrical, Electronic & Information Technologies (DKE). We deal with all topics related to the future of standardization.

Point of contact for young standard setters

[Next Generation DKE](#) is a community for young professionals, students and everyone interested in participating in the standardization process or for all those who are relatively new to the field of standardization.

The DKE has launched the Next Generation DKE initiative in order to support young standard setters at the DKE and to provide a platform for mutual exchange.

With this in mind and inspired by the Young Professionals Program of the International Electrotechnical Commission (IEC), Next Generation DKE offers a large portfolio including entry-level assistance, trainings, workshops and support programs for its members. Since the community is spread all over Germany, our members have the opportunity of networking, and to present standardization projects and discuss topics of electrotechnical standardization.

In addition to gaining insights into the exciting national and international world of standardization, contacts with experts in many specialized fields are also promoted. Members can also actively participate in organizing the Next Generation DKE, e. g. by submitting project proposals or in presenting their field of work as voluntary topic representatives.

Get in touch with our community!

You have experience in the field of standardization and you wish to exchange ideas with young standard setters? You are seeking for innovative ideas and new perspectives? Or you are working on a standardization project and you are looking for supporters? Contact us and get to know our members.

For our periodic standardization roundtable, for example, we are always looking for exciting keynote speeches and discussion partners. Whether cybersecurity, hydrogen or Artificial Intelligence, our community has a broad range of topics and interests.
